

APPENDIX 1

2012/13 ECONOMIC BACKGROUND

The global outlook stabilised mainly due to central banks maintaining low interest rates and expansionary monetary policy for an extended period. Equity market assets recovered sharply with the FTSE 100 registering a 9.1% increase over the year. This was despite economic growth in G-7 nations being either muted or disappointing.

In the UK the economy shrank in the first, second and fourth quarters of calendar year 2012. It was the impressive 0.9% growth in the third quarter, aided by the summer Olympic Games, which allowed growth to register 0.2% over the calendar year 2012. The expected boost to net trade from the fall in the value of sterling did not materialise, but raised the price of imports, especially low margin goods such as food and energy. Avoiding a 'triple-dip' recession became contingent on upbeat services sector surveys translating into sufficient economic activity to overhaul contractions in the struggling manufacturing and construction sectors.

Household financial conditions and purchasing power were constrained as wage growth remained subdued at 1.2% and was outstripped by inflation. Annual CPI dipped below 3%, falling to 2.4% in June before ticking up to 2.8% in February 2013. Higher food and energy prices and higher transport costs were some of the principal contributors to inflation remaining above the Bank of England's 2% CPI target.

The lack of growth and the fall in inflation were persuasive enough for the Bank of England to maintain the Bank Rate at 0.5% and also sanction additional £50 billion asset purchases; Quantitative Easing (QE), in July, taking total QE to £375 billion. The possibility of a rate cut was discussed at some of Bank's Monetary Policy Committee meetings, but was not implemented as the potential drawbacks outweighed the benefits of a reduction in the Bank Rate. In the March Budget the Bank's policy was revised to include the 2% CPI inflation remit alongside the flexibility to commit to intermediate targets.

The resilience of the labour market, with the ILO unemployment rate falling to 7.8%, was the main surprise given the challenging economic backdrop. Many of the gains in employment were through an increase in self-employment and part time working.

The Chancellor largely stuck to his fiscal plans with the austerity drive extending into 2018. In March the Office for Budgetary Responsibility (OBR) halved its forecast growth in 2013 to 0.6% which then resulted in the lowering of the forecast for tax revenues and an increase in the budget deficit. The government is now expected to borrow an additional £146 billion and sees gross debt rising above 100% of GDP by 2015/16. The fall in debt as a percentage of GDP, which the coalition had targeted for 2015/16, was pushed two years beyond this horizon. With the national debt metrics out of kilter with a triple-A rating, it was not surprising that the UK's sovereign rating was downgraded by Moody's to Aa1. The AAA status was maintained by Fitch and S&P, albeit with a Rating Watch Negative and with a Negative Outlook respectively.

The government's Funding for Lending (FLS) initiative commenced in August which gave banks access to cheaper funding on the basis that it would then result in them passing

this advantage to the wider economy. There was an improvement in the flow of credit to mortgagees, but this was still below expectation for SMEs.

The big four banks in the UK – Barclays, RBS, Lloyds and HSBC – and several other global institutions including JP Morgan, Citibank, Rabobank, UBS, Credit Suisse and Deutsche came under investigation in the LIBOR rigging scandal which led to fines by and settlements with UK and US regulators. Banks' share prices recovered after the initial setback when the news first hit the headlines.

Europe: The Euro region suffered a further period of stress when Italian and Spanish government borrowing costs rose sharply and Spain was also forced to officially seek a bailout for its domestic banks. Markets were becalmed after the ECB's declaration that it would do whatever it takes to stabilise the Eurozone and the central bank's announcement in September of its Outright Monetary Transactions (OMT) facility, buying time for the necessary fiscal adjustments required. Neither the Italian elections which resulted in political gridlock nor the poorly-managed bailout of Cyprus which necessitated 'bailing-in' non-guaranteed depositors proved sufficient for a market downturn. Growth was hindered by the rebalancing processes under way in Euroland economies, most of which contracted in Quarter 4 of 2012.

US: The US Federal Reserve extended QE through 'Operation Twist', in which it buys longer-dated bonds with the proceeds of shorter-dated US Treasuries. The Federal Reserve shifted policy to focus on the jobless rate with a pledge to keep rates low until unemployment falls below 6.5%. The country's extended fiscal and debt ceiling negotiations remained unresolved.

Gilt Yields and Money Market Rates: Gilt yields ended the year lower than the start in April. By September the 2-year gilt yield had fallen to 0.06%, raising the prospect that short-dated yields could turn negative. 10-year yields fell by nearly 0.5% ending the year at 1.72%. The reduction was less pronounced at the longer end; 30-year yields ended the year at 3.11%, around 25bp lower than in April. Despite the likelihood the DMO would revise up its gilt issuance for 2012/13, there were several gilt-supportive factors namely the Bank of England's continued purchases of gilts under an extended QE programme; purchases by banks, insurance companies and pension funds driven by capital requirements and the preference for safe harbour government bonds.

One direct consequence of the Funding for Lending Scheme was the sharp drop in rates at which banks borrowed from local government. 3-month, 6-month and 12-month LIBID rates which were 1%, 1.33% and 1.84% at the beginning of the financial year fell to 0.44%, 0.51% and 0.75% respectively.
