

## 2014/15 ECONOMIC BACKGROUND

### 1. Economic Performance Q1 and Q2

**Growth and Inflation:** The recent strong performance of the UK economy continued with output growing at 0.8% in Q1 2014 and at 0.9% in Q2. The services sector once again grew strongly. On the back of strong consumption growth, business investment appeared to be recovering quickly, albeit from a low base. The annual CPI inflation rate fell to 1.5% year-on-year in August.

Revisions to the Gross Domestic Product (GDP) methodology, now compliant with the European System of Accounting 2010, mean that growth is now estimated to be 2.7% above its pre-recession peak in Q1 2008 rather than just 0.2% higher, the general theme being that the recession was not as deep and the recovery was earlier than initially estimated. In anticipation of these revisions, the MPC has forecast growth at 3.4% in 2014.

**Unemployment:** The labour market continued to improve, with strong employment gains and the headline unemployment rate falling to 6.2%. However, earnings growth remained very weak, rising just 0.6% for the three months May-July 2014 when compared to the same period a year earlier. The growth in employment was masked by a large number of zero-hour contracts and involuntary part-time working.

**UK Monetary Policy:** The Monetary Policy Committee (MPC) made no change to the Bank Rate of 0.5% and maintained asset purchases at £375bn. However, there was a marked shift in tone from the Bank of England's Governor and other MPC members. In his Mansion House speech in June Governor Mark Carney warned that interest rates might rise sooner than financial markets were expecting. Following some mixed messages from Governor Carney later in the summer, the minutes of the August and September MPC meetings revealed a split vote with regards to the Bank Rate. Ian McCafferty and Martin Weale voted to increase Bank Rate by 0.25%, arguing economic circumstances were sufficient to justify an immediate rise. The MPC emphasised that when Bank Rate did begin to rise, it was expected to do so only gradually and would likely remain below average historical levels for some time to come.

In the Bank of England's August Inflation Report the Bank forecast growth to be around 3½% in 2014, easing back thereafter to around its pre-crisis historical average rate. Inflation was forecast to remain at, or slightly below, 2% before reaching the target at the end of the 2-year forecast period.

The Bank's Financial Policy Committee also announced a range of measures to cool the UK's housing market to avert the potential of spiralling house prices derailing a sustainable economic recovery. Key recommendations included lenders stress-testing mortgage applicants can cope with a 3% rise in interest rates; putting a 15% cap on the number of mortgages at more than 4.5 times the borrower's income; and a separate Treasury pledge banning anyone applying for a loan through the Help to Buy scheme borrowing more than 4.5 times their income. The Prudential Regulation Authority also announced that it intends to consult on capital requirements for mortgages.

The result of the Scottish referendum in the end was close, but not as close as many believed it might be. However, the political upheaval set in motion (the Prime Minister's linking of a more devolved Scotland to giving greater powers to English MPs over English-only legislation, the prospect of Scotland's potential freedom to raise taxes not being

replicated elsewhere in the UK) is arguably likely to be just as problematic in the run-up to and beyond next year's general election.

Eurozone inflation continued to fall towards zero (HICP inflation registered just 0.3% in September), and there was mounting evidence that the already feeble recovery was losing pace. The unemployment rate remained stubbornly high at 11.5%. The European Central Bank lowered its official benchmark interest rate from 0.15% to 0.05%. The rate it pays on commercial bank balances held with it was also cut further into negative territory from -0.1% to -0.2% and the Marginal Lending Facility rate cut further to 0.3%. The ECB also announced a programme of acquiring Asset Backed Securities (ABS) from banks in an effort to encourage lending which was viewed as being one step away from full blown Quantitative Easing (QE) adopted by the US, UK and Japanese central banks. The minutes of the Bank of England's MPC meeting in September noted that "*weakness in the euro area had been the most significant development during the month*" and that, if it led once again to uncertainty about the sustainability of euro-area public and external debt, it could damage confidence and disrupt financial markets.

There was no change from the US Federal Reserve as the central bank kept policy on its current track with a reduction in asset purchases by \$10 billion per month. Asset purchases are expected to end by October 2014, expectations therefore turned towards the timing of rate increases. The US economy rebounded strongly in Q2 with annualised growth of 4.6%.

**Market reaction:** Gilt yields have continued to decline and hit a financial year low at the end of August, before ticking upwards in the run up to the Scottish referendum. What has driven yields lower is a combination of factors but the primary drivers have been the escalation of geo-political risk within the Middle East and Ukraine alongside the slide towards deflation within the Eurozone (EZ).

## 2. Outlook for Q3 and Q4

The stronger economic growth seen in the UK over the past six months is likely to use up spare capacity more quickly than previously assumed. Arlingclose has brought forward the timing for the first rise in Bank Rate to Q3 2015.

In addition to two MPC members having voted for a rate rise in August and September, the rhetoric from Committee members has in general become more hawkish. However, the lack of inflationary pressure is expected to allow policymakers to hold off monetary tightening for longer than the market currently expects. The near-term risk is that the Bank Rate could rise sooner than anticipated, which is captured in the 'upside risk' range of our forecast table below.

The focus is now on the rate of increase and the medium-term peak and, in this respect, expectations are that rates will rise slowly and to a lower level than in the past.

	Dec-14	Mar-15	Jun-15	Sep-15	Dec-15	Mar-16	Jun-16	Sep-16	Dec-16	Mar-17	Jun-17
Official Bank Rate											
Upside risk	0.25	0.25	0.25	0.25	0.25	0.25	0.50	0.50	0.50	0.50	0.50
Arlingclose Central Case	0.50	0.50	0.50	0.75	0.75	1.00	1.00	1.25	1.25	1.50	1.50
Downside risk				0.25	0.25	0.50	0.50	0.75	0.75	1.00	1.00
